Chen-Yang Wang

Graduate at NanKai University, China
+86-188-0598-1569 wangchenyang213@gmail.com GitHub Scholar

Education

B.S. - Nankai University | College of Mathematical Sciences — Sep. 2021 – Jun. 2025
M.S. - Nankai University | College of Computer Science — Sep. 2025 – Jun. 2028

- **Research Interests**: Model Evaluation, Implicit Visual Perception
- **Publications**: TPAMI (1)/CVPR (1)/ICLR (1)/ICML (1)
- **Advisors**: Prof. Deng-Ping Fan, Prof. Ming-Ming Cheng

Internship Experience

Xiaomi • Foundation Model Team | Algorithm Research Intern | Multimodal LLM — Sep. 2025 – Jun. 2028

- **Research Focus**: Conducted research on continual learning for multimodal large language models (MLLMs), with a focus on token dynamics and the analysis of catastrophic forgetting in continual learning settings.
- **Outcome**: Co-authored a research paper on multimodal large language models (under review at IJCV).

Research Publications

Context-Measure: Contextualizing Metrics for Camouflage (**Page**)
TPAMI 2027 | CCF-A | First Author | Keywords: Evaluation Metrics, Camouflage

- Proposed a novel context-aware evaluation paradigm to address the limitations of existing metrics in camouflaged object segmentation, and instantiated it as *Context-Measure* for camouflage scenarios.

AlignedNorm: Prompting Vision–Language Models via Coupled Prompt Field (**Page**)
ICML 2026 | CCF-A | Second Author | Keywords: Large Model Fine-tuning, VLM

- Proposed a coupled prompt field framework for improving prompt-based adaptation in vision–language models, enabling more effective multimodal representation alignment and downstream transfer.

Evi-Prefill: Evidence-Aware Prefill for Efficient Long Video Understanding (**Page**)
ICLR 2026 | CCF-A | Second Author | Keywords: Video Understanding

- Proposed a novel context-aware evaluation paradigm to address the limitations of existing metrics in camouflaged object segmentation, and instantiated it as *Context-Measure* for camouflage scenarios.

G-Matting: Gradient-Reference for High-Resolution Video Human Matting (**Page**)
CVPR 2027 | CCF-A | Second Author | Keywords: Video Human Matting

- Proposed a novel context-aware evaluation paradigm to address the limitations of existing metrics in camouflaged object segmentation, and instantiated it as *Context-Measure* for camouflage scenarios.

Other Research Achievements

- ECCV 2024, ICCV 2025

Projects

Nankai University Library Seat Reservation System | Python — Apr. 2022 – May 2022

- Developed a library seat reservation system that allows users to select dates, time slots, and seat types through web and mobile interfaces. The system provides real-time seat availability and reservation services, improving seat utilization efficiency and helping students better organize their study schedules.

Academic Services

- Conference Reviewer for: CVPR (2026), AAAI (2027)
- Journal Reviewer for: IEEE TPAMI (2026), IEEE TIP (2026), MIR (2025, 2026), VINT (2025, 2026)

Research Interest

- Large Language Model
- Camouflaged Object Detection
- Generative Model
- Video Human Matting

Honors

- Recognized as a CVPR 2026 Outstanding Reviewer (top 6.1%).
- Awarded the Nankai University Gong Neng Scholarship (top 5%, 2023).

Skills

- Programming: C++, Python, LaTeX, MATLAB
